AMS 562 Homework 1

Due: Monday, 9/24, 11:59 pm

Your task is:

Write a program that is able to talk to the user and ask for his/her title, name, date of birth (dob), and a brief "about me". Notice that for the title, name and dob, you must read them in through the input operator, i.e. `>>`, and use `std::getline` for the "about me". Finally, print out the message (in the terminal screen) in the following format:

<title> <first_name> <last_name>
<tab space>DOB:<year>\<month>\<day>
<tab space>Bio: <about me>

Hints:

1. For printing `tab space` and \(backslash), you need to use *escape sequences*.

2. Don't forget the proper treatment of mixing the use of input operator (`>>`) and `std::getline`.
